	Index	21

CHAPTER 1

wcraas_control

WCraaS Storage Service

- Free software: MIT license
- Documentation: <https://wcraas-control.readthedocs.io>.

1.1 Features

- TODO

1.2 Credits

This package was created with [Cookiecutter](#) and the [audreyr/cookiecutter-pypackage](#) project template.

2.1 Stable release

To install `wcraas_control`, run this command in your terminal:

```
$ pip install wcraas_control
```

This is the preferred method to install `wcraas_control`, as it will always install the most recent stable release.

If you don't have `pip` installed, this [Python installation guide](#) can guide you through the process.

2.2 From sources

The sources for `wcraas_control` can be downloaded from the [Github repo](#).

You can either clone the public repository:

```
$ git clone git://github.com/WCraaS/wcraas_control
```

Or download the [tarball](#):

```
$ curl -OJL https://github.com/WCraaS/wcraas_control/tarball/master
```

Once you have a copy of the source, you can install it with:

```
$ python setup.py install
```

CHAPTER 3

Usage

To use `wcraas_control` in a project:

```
import wcraas_control
```

4.1 wcraas_control package

4.1.1 Submodules

4.1.2 wcraas_control.cli module

Console script for wcraas_control.

4.1.3 wcraas_control.config module

class wcraas_control.config.**Config**

Bases: *wcraas_control.config.Config*

classmethod **fromenv()**

Create a *wcraas_control.Config* from Environment Variables.

```
>>> conf = Config.fromenv()
>>> type(conf)
<class 'config.Config'>
>>> conf._fields
('amqp', 'redis', 'interval', 'loglevel')
>>> conf.amqp
AMQPConfig(host='localhost', port=5672, user='guest', password='guest')
>>> conf.redis
RedisConfig(host='localhost', port=6379)
>>> conf.interval
10
>>> conf.loglevel
20
```

class wcraas_control.config.**RedisConfig**

Bases: *wcraas_control.config.RedisConfig*

classmethod fromenv()

Create a `wcraas_control.RedisConfig` from Environment Variables.

```
>>> conf = RedisConfig.fromenv()
>>> type(conf)
<class 'config.RedisConfig'>
>>> conf._fields
('host', 'port')
>>> conf.host
'localhost'
>>> conf.port
6379
```

4.1.4 wcraas_control.wcraas_control module

The WCraaS Control module is responsible for the orchestration of tasks in the platform.

class wcraas_control.wcraas_control.RedisLockState

Bases: `enum.IntEnum`

An enumeration.

DONE = 2

FAIL = 3

FREE = 0

LOCK = 1

class wcraas_control.wcraas_control.ControlWorker (*amqp:*

wcraas_common.config.AMQPConfig,
redis:
wcraas_control.config.RedisConfig,
*interval: int, loglevel: int, *args,*
***kwargs)*

Bases: `wcraas_common.wcraas_common.WcraasWorker`

Control Worker for the WCraaS platform, responsible for the orchestration of tasks.

```
>>> from wcraas_control.config import Config
>>> cn = ControlWorker(*Config.fromenv())
```

crawl (*url: str*)

Given URL orchestrate crawling of the target.

Parameters *url* (*string*) – Entrypoint URL for crawling the target.

list_collections ()

List the collections available at the storage node.

start ()

Asynchronous runtime for the worker, responsible of managing and maintaining async context open.

4.1.5 Module contents

Top-level package for `wcraas_control`.

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

5.1 Types of Contributions

5.1.1 Report Bugs

Report bugs at https://github.com/WCraaS/wcraas_control/issues.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

5.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” and “help wanted” is open to whoever wants to implement it.

5.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “enhancement” and “help wanted” is open to whoever wants to implement it.

5.1.4 Write Documentation

control could always use more documentation, whether as part of the official control docs, in docstrings, or even on the web in blog posts, articles, and such.

5.1.5 Submit Feedback

The best way to send feedback is to file an issue at https://github.com/WCraaS/wcraas_control/issues.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

5.2 Get Started!

Ready to contribute? Here's how to set up *wcraas_control* for local development.

1. Fork the *wcraas_control* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/wcraas_control.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv wcraas_control
$ cd wcraas_control/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 wcraas_control tests
$ python setup.py test or pytest
$ tox
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

5.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.7, 3.5, 3.6 and 3.7, and for PyPy. Check https://travis-ci.org/WCraaS/wcraas_control/pull_requests and make sure that the tests pass for all supported Python versions.

5.4 Tips

To run a subset of tests:

```
$ pytest tests.test_wcraas_control
```

5.5 Deploying

A reminder for the maintainers on how to deploy. Make sure all your changes are committed (including an entry in HISTORY.rst). Then run:

```
$ bump2version patch # possible: major / minor / patch
$ git push
$ git push --tags
```

Travis will then deploy to PyPI if tests pass.

6.1 Development Lead

- Kolokotronis Panagiotis <panagiks@gmail.com>

6.2 Contributors

None yet. Why not be the first?

7.1 0.1.2 (2019-10-28)

- BUGFIX: Avoid infinite recursion over leftover failed URLs.
- Add more detailed logging & proper loglevels.

7.2 0.1.1 (2019-10-02)

- Mark docs as stable.

7.3 0.1.0 (2019-09-21)

- First release on PyPI.

CHAPTER 8

Indices and tables

- `genindex`
- `modindex`
- `search`

W

- `wcraas_control`, 8
- `wcraas_control.cli`, 7
- `wcraas_control.config`, 7
- `wcraas_control.wcraas_control`, 8

C

`Config` (class in `wcraas_control.config`), 7
`ControlWorker` (class in `wcraas_control.wcraas_control`), 8
`crawl()` (`wcraas_control.wcraas_control.ControlWorker` method), 8

D

`DONE` (`wcraas_control.wcraas_control.RedisLockState` attribute), 8

F

`FAIL` (`wcraas_control.wcraas_control.RedisLockState` attribute), 8
`FREE` (`wcraas_control.wcraas_control.RedisLockState` attribute), 8
`fromenv()` (`wcraas_control.config.Config` class method), 7
`fromenv()` (`wcraas_control.config.RedisConfig` class method), 7

L

`list_collections()` (`wcraas_control.wcraas_control.ControlWorker` method), 8
`LOCK` (`wcraas_control.wcraas_control.RedisLockState` attribute), 8

R

`RedisConfig` (class in `wcraas_control.config`), 7
`RedisLockState` (class in `wcraas_control.wcraas_control`), 8

S

`start()` (`wcraas_control.wcraas_control.ControlWorker` method), 8

W

`wcraas_control` (module), 8
